Status

Idea stage. This repository is the project home for GrowLakh. The idea is described below, and code will be added during the official build phase.

The Problem

Millions of gig workers and low-income families with volatile income are locked out of wealth creation. Hidden bank penalties, overdraft fees and high-interest loans drain their money, and they cannot build assets.

Who is affected: informal-economy workers, delivery partners (e.g. Uber/Zomato), small freelancers, and lower-income rural-urban families living paycheck-to-paycheck.

Pain points

- **Wealth degradation:** capital lost to hidden fees, penalties and payday loans.
- **The paystub barrier:** no fixed income history means no access to mutual funds, housing or institutional micro-loans.
- **High failure risk:** no low-risk way to test a business idea before moving from gig labour to ownership.

Our Idea

GrowLakh is an automated financial mobility platform that turns survival budgeting into active wealth generation.

It helps users to:

1. **Stop the leaks:** find and flag hidden fees in their transaction history.
2. **Earn faster:** pick up zero-capital local micro-gigs and sponsored financial-literacy courses that add to a locked milestone fund.
3. **Unlock at ₹5 Lakh:** reaching the milestone opens a path-selection screen.
4. **Deploy with lower risk:** start automated SIP investments, or launch a pre-validated local micro-business after collecting customer pre-orders (for example through a localized WhatsApp catalog and UPI link).

Example user journey

A delivery driver removes ₹1,500/month in hidden fees → earns extra through in-app modules → reaches the ₹5 Lakh milestone → chooses a "Cloud Kitchen" blueprint → collects pre-orders from neighbours via a UPI link → launches the business.

Key Features

- **Predatory Fee Audit:** shows where money is leaking.
- **Alternative Gig-Credit Profile:** turns irregular deposits into a verifiable trust rating.
- **₹5 Lakh Threshold Matrix:** moves users from saving to asset deployment.
- **Zero-Capital Micro-Gig Station:** in-app ways to earn.

What makes it different

Budget apps (like Walnut or Splitwise) only track spending. Stock brokerages need financial literacy and starting capital. GrowLakh connects **saving, earning and launching** in one loop.

Planned Tech Stack

Layer	Technology
Frontend	Flutter / React Native
Backend & data	Python (FastAPI, pandas, numpy) for transaction-log parsing

Layer	Technology
AI layer	Lightweight models for cash-flow forecasting; LLM agents for business form filing
Database	PostgreSQL (encrypted user analytics)

Impact & Scalability

- **Impact:** faster path to financial independence for lower-income users. Our target is to cut systemic debt-trap risk by up to 40%.
- **Beneficiaries:** gig workers, street vendors, rural micro-entrepreneurs, and unbanked communities.
- **Scalability:** partnerships with CSR bodies, micro-finance institutions and gig-delivery aggregators through standard REST APIs.

Roadmap

- **Phase 1: Hackathon MVP:** bank statement parsing engine, milestone dashboard, and mock business runway planners.

- **Phase 2: Post-hackathon:** live bank API integrations, alternative credit scores, and AI marketing generators.
- **Phase 3: Go-to-market:** corporate sponsorship onboarding for Learn-to-Earn workflows.
